Approx 70 pieces per ton

Homestead - Reclaimed

Roughly 8 1/2" x 5" | 5" thick
Approx 30-35 saft per ton

Belgium Black Granite Pavers

sustainability recognized.

Halquist Stone is proud to be awarded certifications for quarrying and fabrication operations under ANSI-NSC 173 Sustainable Production of Natural Dimension Stone Standards. We are **the only midwest dolomitic limestone producer to be certified, and only the ninth company in the USA** to be awarded. This certification is the ONLY certification for stone companies, and is nationally recognized by the United States Green Building Council. Architects, masons, and owners can rest assured that Halquist Stone products have been produced to the highest standards of social, economic and environmental responsibility in the stone industry.

In its truest form, sustainability is a three-prong strategy involving environmental, social and economic requirements and that is how green building programs have been created. Construction materials must have an environmentally preferable profile over their life cycle, from raw material extraction through the use phase and finally at the end of its application. The methods used to construct the building must be environmentally considerate. USGB LEED® is based on upholding these canons, and using sustainable stone can give one LEED® credit - regardless of building location.

NOTES: All of Halquist Stone's owned quarry sites have been certified under ANSI/NSC 373. Halquist also uses leased quarry sites that operate under the same procedures as our company owned sites. Halquist also purchases raw material from certified as well as non-certified sites. Please consult with your sales consultant which blends are considered certified under ANSI/NSC 373.

PROUD MEMBERS OF THESE FINE ORGANIZATIONS

Because natural stone is made from nature, variations should and can be expected. Even though colors in this brochure are as close to the actual blend as possible, photographic and printing techniques - and actual viewing conditions - can alter perception of color.
